

Five metrics

1. CPUUtilization - The percentage of allocated EC2 compute units that are currently in use on the instance. This metric identifies the processing power required to run an application on a selected instance. Used for ASG
2. DiskReadOps - Completed read operations from all instance store volumes available to the instance in a specified period of time.
3. DiskWriteOps - Completed write operations to all instance store volumes available to the instance in a specified period of time.
4. NetworkIn - The number of bytes received on all network interfaces by the instance. This metric identifies the volume of incoming network traffic to a single instance.
5. NetworkOut - The number of bytes sent out on all network interfaces by the instance. This metric identifies the volume of outgoing network traffic from a single instance.
